[57] ABSTRACT

A kettle is provided which includes a body defining a storage unit and including a spout coupled to the body and defining an opening. The kettle also includes a handle having first and second ends and coupled to the body for rotation about a second axis disposed between the first and second ends and engageably coupled to the spout lid, wherein the rotation of the handle in a first direction causes movement of the lid to its open position and rotation of the handle in a second direction causes movement of the lid to its closed position.
